

Evaluate Next Generation Aligned Materials Using EQuIP Rubric for Science

HIGH SCHOOL SCIENCE
Career & College Readiness Conferences
Summer 2014

To what extent have you interacted with this document?

- A. I've read it thoroughly.
- B. I've skimmed it for general information.
- C. It's on my bookshelf.
- D. Huh?

http://www.nap.edu/catalog.php?record_id=13165

How about this one?

- A. I've read it thoroughly.
- B. I've skimmed it for general information.
- C. It's on my bookshelf.
- D. No clue

Or this one?

- A. I've read it thoroughly.
- B. I've skimmed it for general information.
- C. It's on my bookshelf.
- D. It's the first time I've seen it.

4

Developing Criteria for the Next Generation Science Standards

5

Outcomes

- Identify the purpose of the EQiP Rubric for Science
- Identify the elements (expectations) of the Rubric that supports implementation of NGSS
- Evaluate a lesson using the EQiP Rubric for Science

6

What is the EQiP Rubric?

The EQiP Rubric for Science provides criteria by which to measure the alignment and overall quality of lessons and units in respect to NGSS.

<http://nsta hosted.org/pdfs/ngss/EQIPRubric.April.2014.pdf>

7

What is the Purpose of EQiP Rubric for Science?

The EQiP Rubric for Science is used to

- * provide meaningful, constructive feedback to developers of lessons or units.
- * review existing instructional materials to determine what revisions are needed.
- * identify exemplars/models for teachers to use.
- * guide collegial review and jurying processes.

8

Intended Use

The rubric is designed to evaluate

- * lessons that include instructional activities and assessments aligned to the NGSS that may extend over a few class periods.
- * units that include integrated and focused lessons aligned to the NGSS that extend over a longer period of time.

9

Turn and Talk

Using what you know about NGSS, identify important considerations or criteria to consider when evaluating the alignment of a lesson or unit with NGSS.

10

Addressing the NGSS Shifts

Shifts in NGSS for K-12 science: Both *Evolutionary* and *Revolutionary*

1. Organized around disciplinary core ideas (explanatory ideas)
2. Central role of scientific practices
3. Coherence: building and applying ideas across time

11

Conceptual Shifts in the NGSS

1. K-12 science education should reflect the interconnected nature of science as it is practiced and experienced in the real world.
2. The Next Generation Science Standards are student performance expectations – **NOT** curriculum.
3. The science concepts build coherently from K-12.
4. The NGSS focus on deeper understanding of content as well as application of content.
5. Science and Engineering are integrated in the NGSS from K-12.
6. NGSS content is focused on preparing students for college, careers, and citizenship.
7. The NGSS and Common Core State Standards (English Language Arts and Mathematics) are **Aligned**.

13

NGSS “is designed to help realize a vision for education in the sciences and engineering in which students, over multiple years of school, actively **engage** in scientific and engineering **practices** and **apply crosscutting concepts** to **deepen their understanding** of the **core ideas** in these fields.”

14

A lesson or unit may provide opportunities for students to demonstrate performance of practices connected with their understanding of core ideas and crosscutting concepts as foundational pieces.

Three Dimension Learning		
SCIENCE AND ENGINEERING PRACTICES	CORE IDEAS	CROSSCUTTING CONCEPTS

15

I. Alignment to the NGSS

The lesson or unit aligns with the conceptual shifts of the NGSS:

- o Elements of the science and engineering practice(s), disciplinary core idea(s), and crosscutting concept(s), blend and work together to support students in three-dimensional learning to make sense of phenomena or design solutions.
- o Provides opportunities to use specific elements of the practice(s) to make sense of phenomena or design solutions.
- o Provides opportunities to construct and use specific elements of the disciplinary core idea(s) to make sense of phenomena or design solutions.
- o Provides opportunities to construct and use specific elements of the crosscutting concept(s) to make sense of phenomena or design solutions.

**Column I
Lessons**

**3 Dimensional
Learning**

19

**Column I
Units**

A unit or longer lesson:

- o Lessons fit together coherently, build on each other, and help students develop proficiency on a targeted set of performance expectations.
- o Develops connections between different science disciplines by the use of crosscutting concepts and develops connections between different science disciplines by using disciplinary core ideas where appropriate.
- o Provides grade-appropriate connection(s) to the Common Core State Standards in Mathematics and/or English Language Arts & Literacy in History/Social Studies, Science and Technical Subjects.

**Coherence in
building and
applying ideas over
time.**

**Connections with
MCCS in Math and
Literacy**

20

**Column 2
Instructional Supports**

What are the instructional supports identified in the rubric that are a valued indicator of quality instruction for all students?

21

Column 3 Monitoring Student Progress

Look for evidence of assessments that demonstrates:

- alignment to 3 dimensions of learning.
- observable evidence of performance.
- embedded formative assessment.
- use of rubrics and scoring guidelines.
- a variety of methods.
- accessibility to all students.

Group Review

Step 1 – Review Materials

Become familiar with the rubric, the lesson, or unit, and the practices, disciplinary core ideas, and crosscutting themes targeted in the lesson.

- * Review rubric and record lesson/unit title and grade.
- * Scan the organization of the lesson/unit to identify core ideas, practices, and crosscutting concepts
- * Read key materials related to instruction, assessment and teacher guidance

25

Step 2 – Apply Criteria in Column I : Alignment

- * Evaluate the lesson/unit using the criteria in the first columns.
- * Check those criteria for which **clear** and **substantial evidence** is found.

26

Step 3 – Apply Criteria in Columns II And III Instructional Supports and Monitoring Student Progress

- * Evaluate the lesson or unit using the criteria in the second and third columns.
- * Individually check and record each criterion on the response from for which **clear** and **substantial** evidence is found.
- * *Identify criterion-based suggestions for improvements.*

27

Team Discussion

- * The goal is to determine agreement about quality with respect to NGSS.
- * Use evidence identified during the review process to discuss the alignment of the lesson to each element in Column I, II, and III.
- * Discuss suggestions for improvement or revisions to better align the lesson with the elements identified on the rubric.

28

Share evaluations of lessons

Outcomes

- Identify the purpose of the EQulP Rubric for Science
- Identify the elements (expectations) of the Rubric that supports implementation of NGSS
- Evaluate a lesson using the EQulP Rubric for Science
